

Password Reset and Account Recovery Guide

1. How to Reset Your Password

To reset your password, navigate to the Login page and click on the 'Forgot Password' link below the input fields. Enter your registered email address and click 'Send Reset Link'. An email containing a secure token will be sent to you within 5 minutes. Click the link in the email, enter your new password, and click 'Update Password'.

2. Troubleshooting Password Reset Link Issues

If you do not receive the password reset email, please check your spam or promotions folders. Make sure the email address entered matches your registered account email exactly. Additionally, check that your network allows incoming SMTP emails from support@adsparkx.com. If the reset link says it is expired, request a new link, as each link is valid for only 15 minutes.

3. Account Locks and Security

For security reasons, your account will be temporarily locked after 5 consecutive failed login attempts. The lock duration is 30 minutes. You can wait for the lock to expire automatically or reset your password to bypass the lock immediately. If your account has been locked due to suspicious activity, please contact support for identity verification. To prevent future account locks, clear your browser cache and cookies, as outdated passwords stored in autofill settings can trigger failures.
